

Chapter Tech Session

This is an announcement of a Chapter Tech Session to be held Saturday February 13, 2016 in Houston. The subject is zinc plating and more broadly, metal finishing using available kits from industrial and hobby suppliers. Plating and metal finish assessment are an integral component of our judging processes and this topic is an excellent one for a Tech Session. I should make clear that this session does not involve chrome plating, but rather other plating found on chassis and engine bay components.

The leader is NCRS member Howard Heinsohn who has spent the past year or more testing and experimenting with the various plating products. During the session, various small Corvette parts will be treated and plated. Our venue host will be Gordon Andrus, whose Houston Corvette Service shop has been used for certain prior Tech Sessions.

Location:

Houston Corvette Service
4537 Steffani (off Clay Road)
Houston, Texas 77041

[713-896-0019](tel:713-896-0019)

Time: February 13, 2016
9:30AM;
Please arrive between 9 and 9:30AM

The session should last up to 2 hours with questions and discussion.

Lunch: Pizza and soft drinks/water

Drive a Corvette and bring a folding chair if you have room.

In order to aid in planning, RSVP would be appreciated
